- Hands and forearms pre-surgical scrub for healthcare personnel.

Efficacy

- **Bactericidal:** (EN1499, EN1276, EN13727) *Escherichia coli*, *Staphylococcus aureus*, *Enterococcus hirae*, *Pseudomonas aeruginosa*.
- **Yesticidal:** (EN1650, EN13624) *Candida albicans*.
- Surgical wash (EN12791).

Composition

- Chlorhexidine digluconate at 4%.
- Non ionic surfactants.
- Emollients, excipients and water.

Presentation

- 100 units pack of **20ml** one-dose sachets.
- **500ml** bottle with a pump dispenser.
- **1L** airless bottle.

Accessories

BactiScrub is a 4% chlorhexidine soapy gel for soft and deep skin cleansing and care. The gel texture reinforces the chlorhexidine retention onto the skin.

It is a solution for both antiseptic washing of the patient's skin (surgical, intensive and colonized) and pre-surgical antiseptic cleansing of hands and forearms of the healthcare personnel.

Bactiscrub's chemical composition is free of anionic surfactants, allowing the product to moisturise and take care of the skin. Furthermore, the higher adhesion of the product enhances the sustained effect of the chlorhexidine, acting as a **antibacterial barrier**, and as a result, reducing the bacteria on the skin for hours.

Provides deep care and moisture of the skin
